WIRCON

Benefits of Wircon Wireless Dispensing System:

- Increase profits through added control
- Eliminate the risk of staff mistakes and potential theft
- Speed up service with fast and controlled dispensing
- Move around freely and swiftly with unique wireless technology
- Streamline stock control/rotation and facilitate stock orders with detailed data
- No manual inventory is required as the system logs everything that has been served
- Generate detailed sales and stock reports within seconds
- Data provides accurate financial calculations and overview
- Attractively designed and available in custom colors or with imprinted logos

**A revolutionary technology
with extensive cost saving benefits
at a competitive price**

Product Description

The Wircon Wireless Dispensing System is the only bar management solution in the world to offer full accounting control, measured or free pour dispensing, and wireless technology. Wircon's dispensing systems are sold or leased as packages in sizes of 40 to 1000 spouts or more. A full package provides you with everything you need, including spouts with built-in wireless technology, receiver, software, security tape, and an easy-to-use installation guide. Each spout has 4 different settings and all can be individually programmed. **For example: 1oz - 2oz - Free pour - Off.**

Stay Connected

Use of a Wircon System is easy and effective. When a spout dispenses, it sends a signal via a wireless connection to the main receiver. From there the data registers on the computer where the software has been installed. The pre-programmed software in each spout allows management to see exactly what spirit has been distributed, time and date stamp, and the quantity served.

Eliminate Problem Areas

The Wircon system eliminates the opportunity for staff mistakes and potential theft. The security sealing device ensures that no spout can be taken off without management's knowledge. In addition, it is not possible to extract any liquor from a bottle unless the valve in the spout is legitimately activated, giving management complete control and peace of mind.

Quicker Service

The Wircon patented spout selector, located conveniently on every Wircon spout, allows selection of a free pour or an automatically dispensed measured serving without use of a measurement device or dispensing ring. This minimizes handling time and improves speed of service. Wireless connectivity allows normal activity by bar personnel and does not impede service in any way.

Freedom of Movement

Wireless spout communication with receiver works perfectly within 1000 feet or 330 yards under normal working conditions. The wireless signal carries through walls and other obstacles without interference. It allows staff to move freely around the bar and premises, swiftly dispensing alcohol as it is logged into the system. If for any reason the signal is blocked or the dispenser goes outside the 1000 foot range, the data is saved in the spout's individual technology and transferred when it has a connection to the receiver again.

Stock Control

All data of liquor sold or dispensed remains in the system and can be easily retrieved at any time. This feature saves valuable time on stock accounting/ inventory and also facilitates quick and easy stock re-ordering.

Complete Management

The Wircon system allows management to monitor how busy the bar is at any given time, even from a remote location using an online connection. The data gives an actual overview of all bar-related activities, and facilitates optimal shift staffing, reducing the risk of over or understaffing.

"Added control over my staff has made a crucial difference in the way I run my business, and had a positive effect on revenue." **Peter Hansen**

Pour by department report 10-10-2007 09:17 **WIRCON**
Cutting edge wireless dispensing system

Optional Filtering		Department	All
Department	Group	All	All

25	Rum	--	1	25,10	45,32
Grand Total Bar 2			2	50,20	90,64
Grand Total All Departments			3	62,77	114,97

Precise Accounting

The Wircon system allows liquor accounting to be completed quickly and at a new level of precision, thus reducing inventory-related salary costs and the risk of potential errors. The system logs everything that has been served and compiles comprehensive product reports that can be viewed by different categories, liquor brand, specific bars within the same location, and an entire establishment. Reporting can be generated for any given period of time, giving you instant viewing of your establishment's production at end of day, week, month, or any other desired period of time. Wircon systems are also POS compatible.

A Wircon system will give you easy access to all the information you need, measured pouring technology, wireless connectivity and security features to easily manage your business, while increasing your profits and giving you peace of mind.

Ease of Use:

- Easy step by step installation guide
- Simple installation
- Quick-select switch for measure or free pour amounts on every spout
- User friendly software
- Detailed graphs and charts at the touch of a button
- Professional customer support

"I have recently installed the Wircon dispensing system. There are too many benefits to list, however the main one for me has been the added control and security I have over my business. I also like the freedom of movement this system provides when dispensing, which has allowed us to speed up our service." David Patrick

FAQ's

• How do I know if a spout is being used at my bar?

Whenever a spout is in use, data is sent to the receiver and a picture of the bottle being poured is displayed on the computer screen.

• What is the life span of the spout?

We estimate that the average life span is 8 to 10 years. Of course, this fully depends on how well the spouts are treated and how often they are used.

• Is the system easy to install?

Yes, very. The package comes with a simple do-it yourself installation guide. In addition, customer support is readily available at **1(800) 994-4799** or e-mail at wircon-support@sheffimports.com should assistance be needed.

• How would I get support once I have the product?

You can call us at **1(800) 994-4799** or e-mail us at wircon-support@sheffimports.com for any and all customer service issues.

• Do the spouts adjust to any bottle?

Yes they fit all current bottles.

• What is the lead time for delivery?

Depending on what is in stock, deliver time can be between 1 and 12 weeks.

• When is payment due?

50% due upon placement of order and remaining 50% is due upon delivery.

• Can the package be leased? - Yes.

• What is the warranty for this product?

The warranty is one year for all parts. Replacement for any faulty spouts or parts will be provided within the warranty period. The warranty does not cover abnormal use or excessive force.

• Is the system patented? - Yes.

• How does the security seal work?

After the spout is inserted in a bottle, a half inch Wircon security tape is placed around the neck of the bottle securing the spout. If there is any attempt to remove the spout, the security tape changes color.

• How many security seals come with a package?

One roll of 600 security seals comes with each package. Additional seals available for immediate delivery.

• What color is the security tape and can we order a customer color?

Standard security tape colors are readily available in blue and black. Yes, custom colors can be ordered at an additional charge.

• How do I know if a bartender has removed the spout and done a pour directly from the bottle?

Wircon's innovative security seal consists of a two-layered label that clearly shows if it has been tampered with by changing color.

• Does the spout work from a battery?

Yes, and is included pre-installed in each spout. Batteries typically will last for at least 3000 pours and are easily replaced if needed.

• Will the Wircon system slow staff service?

No, not at all. Service will be swift as bartenders can move around freely. Our dispensing system is also very simple to use.

• Can I program prices for each pouring amount and free pour on each individual spout?

Yes, every measured pouring or free pour for every bottle can be programmed with an individual price.

• How do I handle happy hours or price specials?

A happy hour/price special option is included in the software and offers easy set up of automatic price changes for any given period of time or days.

• How do we clean the spouts and will submerging the spout in water affect the technology within the spout?

No, Wircon spouts are fully waterproof and can be cleaned by simple rinsing procedure.

• Can I put them in a dishwasher?

Though the spouts are waterproof, spouts should not be washed in a dishwasher.

• What happens if a bottle goes empty in the middle of service?

Since management alone will want the responsibility of replacing empty bottles and inserting spouts, either a manager on duty during service will be responsible for the change or additional bottles with spouts and seals attached should be set up prior to opening.

• How long does a spout change take?

Inserting a Wircon spout and securing it with a security seal takes just a few seconds.

• What is the reach of the spout and does the data get lost if you go outside this distance?

In open air the range is approximately a 1000 foot radius, but the reach will be reduced if the signal has to go through concrete walls and other like obstacles. If the spout can't get in contact with the receiver it will store the data until it is within range and then send all information stored to the receiver at that point.

• Does the system work with POS?

Yes, POS connections are available for all popular POS Services.

The Wireless Dispensing System of the Future!

A world-class patented innovation for the bar industry
